

MONTH 07 OF 10

Metabolic Reset

Movement as medicine for energy and
blood sugar

30-day guide · muviko.app

Movement as medicine for energy and blood sugar

This month focuses on one core theme across four weeks. Each week builds on the last — read the science, apply the daily actions, track your progress.

Your 4 weeks at a glance

Week 25 The Post-Meal Glucose Spike

Week 26 Insulin Sensitivity

Week 27 Movement Over Caffeine

Week 28 4-Week Metabolic Protocol

Your daily non-negotiable: 3.4 minutes of vigorous movement, every day. Everything this month layers on top of that foundation.

Weeks 1 & 2

WEEK 25

The Post-Meal Glucose Spike

A 10-minute walk after eating reduces glucose spike by 22% compared to sitting. 2-minute vigorous activity reduces it by 38%. Timing is the intervention.

- Mon–Fri: Walk (briskly) within 10 minutes of finishing every meal. Non-negotiable.
 - Sat: Try the vigorous version: 2-minute fast walk or body-weight exercise after lunch.
 - Sun: Compare how you feel in the afternoon. The data shows — so will you.
-

WEEK 26

Insulin Sensitivity

Skeletal muscle is the primary site of glucose disposal. Every vigorous burst opens GLUT-4 transporters, independently of insulin. This is exercise as metabolic medicine.

- Mon–Tue: Pre-breakfast vigorous burst (fasted). Notice your energy for the first 2 hours.
- Wed–Thu: Post-lunch vigorous burst. Notice your 2–3pm energy.
- Fri–Sun: Which timing has the biggest impact on your daily energy arc?

Weeks 3 & 4

WEEK 27

Movement Over Caffeine

Caffeine blocks adenosine receptors (fatigue signal). Movement clears adenosine and releases natural dopamine. The difference: movement's effect lasts 90+ minutes with no crash.

- Mon–Wed: Replace your second coffee with a 2-minute vigorous burst. Track energy.
 - Thu–Fri: Try both: coffee at 9am, movement burst at 1pm. Rate your 2–4pm window.
 - Sat–Sun: What's your personal caffeine vs. movement sweet spot?
-

WEEK 28

4-Week Metabolic Protocol

Morning fasted burst + post-meal walking + afternoon vigorous micro training. Three daily touchpoints that compound into measurable metabolic health improvement.

- Mon–Fri: All 3 touchpoints daily. Log morning burst time, post-meal walk, afternoon effort.
- Sat: Fasting glucose (optional): finger prick or CGM reading in the morning.
- Sun: Review your week's energy consistency. What changed?

30-day habit tracker

Mark each day you hit your minimum 3.4 minutes of vigorous movement. Print and stick somewhere visible.
